

Watering Instructions:

For a newly SEEDED lawn:

- Keep seeds evenly moist.
- Avoid flooding the seed as it will wash away
- Water daily for about 20 minutes
- Sunny spots may need additional watering
- Water 2x per day for faster germination
- Stay off seeded area until established
- Once seed germinates, continue to water, keeping soil moist but not soggy
- Once cooler temperatures slow the growth, watering can stop

For a newly SODDED lawn:

- Keep it watered daily for 45 minutes to an hour each morning, unless we get a saturating rain.
- Water 2x per day if temperatures are over 80 degrees
- Do this for the first 3-4 weeks and then 3 times per week for the rest of the season.
- Stay off of it for the first two weeks to give it a chance to take root.
- Wait 2-3 weeks to mow it for the first time and be sure to set your mower to a high setting and bag the grass clippings.
